

Invitae is a College of American Pathologists (CAP)-accredited and Clinical Laboratory Improvement Amendments (CLIA)-certified clinical diagnostic laboratory performing full-gene sequencing and deletion/duplication analysis using next-generation sequencing technology (NGS). Invitae's panel tests include:

- Full-gene sequencing: Covers clinically important regions of each gene, including coding exons, +/- 10 base pairs of adjacent intronic sequence (+/-20 bases for BRCA1 and BRCA2), and select noncoding variants.
- Deletion/duplication analysis: Detects most intragenic deletions and duplications at single exon resolution.
- Coverage: Our assay provides a Q30 quality-adjusted mean coverage depth of 350x (50x minimum, or supplemented with additional analysis).
- Confirmation: Variants classified as pathogenic or likely pathogenic are confirmed with orthogonal methods, except individual variants that have high quality scores and previously validated in at least ten unrelated samples.

For some genes, analysis may extend to the promoter region, include additional intronic variants, or be limited to targeted variants or exons. Details can be found at [www.invitae.com](http://www.invitae.com).
