

# CancerGene Connect (CGC)

Faster histories. Better data. Richer assessments.

Risk assessment tools, pedigree drawing, report writing, and data management all in one place. Now available at no charge to all clinicians, not just those with an Invitae account.

## WEB PLATFORM

Think of CGC as your new mobile office. Access all of your patient information securely. Anywhere. Anytime.

## POWERFUL PEDIGREE

A robust pedigree drawing tool that both providers and patients can use to build family histories.

## RICH REPORTS

CGC delivers risk assessment reports designed to make review and analysis clear and simple. We believe your report should provide the depth you need in a format you can share.

## CLINIC DASHBOARD

Evaluate clinical productivity at a glance with customized dashboards. CGC's dashboard facilitates research by allowing you to identify health disparities or isolate patients that meet specific criteria for a given protocol.

## PATIENT-ORIENTED DESIGN

Patients receive a secure login and password to fill out the questionnaire on their computer or mobile device ahead of their appointment. Allowing patients the time to connect with other family members to collect specific details saves time in the clinic and elevates the quality of the data.

## END-TO-END SOLUTION

Print and share customizable fact sheets, risk assessment reports, result letters, pedigrees, and family letters with your patients and peers, without repetitive data entry.

Created by clinicians, for clinicians

### 46% TIME SAVINGS

Less time per case. More time spent with patients.

### OVER 15,000 PATIENTS

Field-tested platform. Proven results.

### UT SOUTHWESTERN

Original platform developer. Trusted foundation.
